

SPECIFICATION AMENDMENT

Page 9, first paragraph:

The engaged-fit junction 35 is formed by the interaction of a first concentric wall 55 with a second concentric wall 60. More particularly, first concentric wall 55 is formed on projection 50 of second element 15. Preferably first concentric wall 55 is disposed on projection 50 coaxial with, and distal to, first taper 40. Second concentric wall 60 is formed along a portion of the sidewall defining the first element's aperture 20. Preferably second concentric wall 60 is disposed on first element 10 coaxial with, and distal to, second taper ~~60~~ 45. First concentric wall 55 and second concentric wall 60 seat securely against one another so as to form the load-bearing engaged-fit junction 35.
